

Amenimon

1. *Broussonii* A. inarome, foliis petiolatis alternis subcordato-ovatis, racemis  
compositis axillaribus Caeualibusque.
2. *lunifolius* A. foliis obovatis arenis aggregatis

2 Coniacium. Amerimnon foliis pennatis ovatis coratci a venis  
Habitat in <sup>India</sup> orientali  
Soba glaberrima

Rami Vertes, cortice purpurascente.

Folia petiolata, impari pennata, bipinna. Foliola petiolata, ovata,  
conspicua, obtusa, emarginata, sesquipedalium, interiora minora.

Radix laterales, dorsales, erecti; pedicelli fraxi, saepe b. triflori  
flores nutantes.

Calyx truncatus, brevis, Corolla multo latior, integerrima

Petala corollae Canna longitudine alarum.

ungues petalorum calyce longior, stylum patens.

Calycis qd Amerimnon diversa cum vero in ceteris sat congruis  
nec tenuis reliquis in plurimis vero a reliquis leguminosis differat  
potius huc retuli

<sup>um</sup>  
buxifolius & foliis simplicibus aggregatis obovatis acuminatis  
aphalathus ebenis foliis aggregatis obovatis obtusis subtus to-  
mentosis, pedunculis bifloris, leguminibus bilobis & spermiis Lin. l. V.  
Habitat in India occidentali 5  
nos. 647.
