

## Embothrium

1. umbellatum E. umbellis axillaribus simplicijs fimbriis pedunculatis, foliis  
oblongis aveniis.
2. coteineum E. tigris terminalibus & spathulis alternis pedicellatis, foliis  
obovatis venosis
3. montana E. racemis axillaribus terminalibusque pedunculatis, foliis  
ellipticis attenuatis venosis, antheni pedicellatis

*heterophylla Quadra* fl. Peru. 1. pag. 63. tab. 99.

Habitat in sylvis et collibus iaduibus Chilie et

Arbor sexangularis, ramos si firmis, semper virens. Rami verticis, strati  
folia alterna, pinnata cum impari vel bipinnata: foliola opposita  
breviter petiolata, ovata vel cordata, basi inaequata, duplicata serrata,  
glabra, nitida: impari sope triloba. Petioli leviter strati, pubescentes:  
racemi astillares, solitarii, simplices. Pedicelli biflori, pubescentes  
et ex. Parolla alba ex his pubescens. Drupa parum carnosa, matura  
rubecundo nigra. Nucleus dulcis, avallando sapore fl. Peru.

Affinis maxime *Embothriis* et differt tantum petalo superiori ericto  
et non multo magis reflexa et opposita, cum petala *Embothrii* omnia  
nra latiora, postea glandula nulla ad basis germenis quod tamen  
et desideranter ex loco b. emarginato

*Embothrium pennatum* foliis simplicibus pinnatisque fl. Peru. 1.  
pag. 63. tab. 99. fig. a.

Habitat in <sup>longo</sup> Muna nivantis et versans 5  
arbor quadriogyalis, frondosa. Truncus erexitus, cortice foetido fere  
rami patientes, rectiles, granulis ad sparsi, venae lanuginosissime  
rugine. Solia alterna, petiolata, venosa, tenuis, coriacea, supra glabra  
nitida, subtus pubescens: puncta simplicia et impari pinnata: pinna  
pliata ovato-lanceolata, serrata, lanuginosa: pinnata foliolosa  
oblique ovata, febrifugalis, acutis, superne serrata, intermedio obovata  
rhomboidata, aequando eroso: semina simplicia, obovata oblonga,  
a medio serrata. Racemi axillares solitarii, erecti, simplices, foliis  
duplo longioris. Flores gemini, breviter pedicellati. Corolla tetrapeta  
ta, parva, rubra. Glandula 4. sub gemina. Germen Vomentosum. Bot  
toni acinaciformes, breves, acumi nati; despermii, breviter pedi  
cellati, tomentosi.

Propala cum Embothrio genera rit different, glandula in illa ad basem  
germinis adscendit ut in non Embothrio fl. Peru

*Embothnun monospermum* foliis ovatis serratis lanuginosis, folliculis monospermis fl. Peru. 1. pag 63. Tab 93.

Habitat in Peruvio montibus frigidi. 5

Arbor triogyalis, frondosa. Truncus erectus; rami. Rami erecti-patentes, teretes; granulosi. Venae lanuginosi, ferruginei. Sola alterna, petro- cata, ovato-oblonga, subtus magis lanuginosa, ferruginea, dorsum ad apicem serrato, veniora integerrima, veniora ad basim usque sive serrata. Racemi axillares, simplices, bipalmares; lanuginosi, ferruginei. Flores gemini, breves et pedicellati. Bractea orata, minuta, decidue. Petala 4. spatulata, revoluta, decidue caducu, alba. Glandula 4 sub germine. Stigma oblongum. Folliculus brevis, monospermus; rami superius fl. Peru.

*Embothrium obliquum* foliis ovato serratis glabris, petalis apice oblique obliquis fl. Peniv. 1. pag. 63. Tab 97.

Habitat Chilie in montibus.

Sunt ex brachygalii, erectus, ramosus. Racemi herbari. Folia alterne petiolata, <sup>remote</sup> ~~ovato~~ <sup>oblonga</sup> coriacea, admodum fere ad apicem serrata, glabra, basi sepe insqualia. Racimi attillares et terminalis. Flores gemini. bractea ora  
do acuto, concavo, decidua. Pedicelli allori. Corolla albidetla  
petala, patens extus hispida. Petala spathulata, apice obliquo reflexo  
acuto, duo remotione omnia basi leviter coherentia. Glandula ter-  
sub germine. Ovule oblonga, obliqua, sessilis, polyspermus.  
fl. Peniv.

*Embothryum dentatum* foliis obovatis dentatis, marginibus revolutis fl. Penae  
1. pag 62. tab. 94. fig. 6.

Habitat in nemoribus et syliis Chilie

Terrae in ergales, glaber rimus. Caulis erectus, ramosus: rami verticigra-  
nulati. Folia alterna, petiolata, estrosum dentata, supra nitida, subtus al-  
bicantia. Racemi axillares, multiflori. Pedunculi graciles, flexuosi,  
4-6 fasciculati. Corolla 5-petala, alba; extus pubescens. Glandulae  
3 sub germine. Germen pubescens. Stigma peltatum. Tollitculi pubescen-  
tes. Semina plura fl. Penae

*Embothryum emarginatum* foliis oblongis emarginatis integrimis fl. Peru. 1.  
pug. 62. tab. 95.

Habitat in collibus frigidis Provincia Tarma, Huancui, Panatahuacum et  
Huameler.

Tristis brachialis, glaberrimus, ramosus, erectus. Rami Teretes, granulosi.  
Solia sparsa, petiolata, breviter acuminata, coriacea, supra nitida  
subtus cinerea. Petiolatus 3 foliis. Racemos Verminalis simplices  
~~longus~~, erectus, multiflora. Flores genuini. Bractea subulata, deci-  
magnus, erectus, multiflora. Flores genuini. Bractea subulata, deci-  
duo. Pedicelli corolla breviores. Corolla inversa, tubulosa  
rosacea. Glandula nulla subgermine. Tolliculus sesquipalma-  
ris, cylindricus, conicus, dependens. Semina à la longa Verminalis  
fl. Peru.

similis cushionlo a Guspes

*Embothrium coccineum* folio lanceolato - linearibus integrimis fl.  
Peruv. t. pag. 62. tab 96.

Habitat in montibus et collibus altis Chilie.

Exinde biorygatus, glaberrimus. Caulis erectus, ramosus, inferne radens.  
Rami verticis, superne foliosi. Tolla per se, petiolata, supra nitida. Racemi  
terminalis, <sup>ramorum axillares</sup> simplices, multiflori. Flores gemini, purpurei. Corolla  
usque ad medium 4 flos, inferne longitudinaliter hispa, tandem in 40 petala  
lanceo-frostulata divisa. Glandula sub germine. Tolleulus oblongus,  
longe acuminatus; parum compressus. Pl. Peruv.

corolla tetrapetala forte dividenda cum seminum dividitur in 4 partes

macrophylla Repola

Habitat Apennino e Blond herb la Mantua.

Ramuli apice ferrugineo tomentosi. Dolia superne, brevissime petiolata, spicata, et ultra, elliptico-lanceolata, basi versus sensim angustata, obliqua, apice acuta, glabra, venosa, integrerrima, supra nitida. Racemi terminali compositi, diffusi: pediculus fructuosa et ultra, uti carolle exstenuis sine tomentoso ferrugineo. Pedicelli copiosi, oppugnati; capillares.

innecta Propala

Habitat Capeno herb-Descrpt. 5

Rami - Veretos glabri. Sola breviter petiolata, vernata, subcuneata, pubescentia, pubescens  
et ultra, integerrimus, parum acuminata, ut longe acuta, venosa, glabra  
nudata. Racemi terminalis, composti. Pedunculi partiales pubescentes; mu-  
tu-flori, sollepi: pedicelli aggregati, 2-4, capillares; patentissimi; uniflori;  
unguisularer. Petala pubescentia, & minus cunctaria, germen ferrugineo hispa-  
sum

pennata Repola

Habitat in <sup>Papana</sup> Quercu herb-la Manche?

Rami teretes. Dolca pennata cum impari, triplex. Dolosa petiolata, op  
posita, 4 pollicaria, elliptica lanceolata, utique venosa, supra nitida  
racemosa est atellis supremis, pendiculata spathamdi. Pedunculi tenui  
to ferrugineo tenus pomo testi uti corolla. Flores pauci, geminatus, clausi  
fusci et non sensim incrassati, sed tantum apice

*Tessellifolia Repala* foliis ad summatus congestas lesplebas  
cuneato-oblongi Act. fod. i. h. par. 1. pug. 10.6  
Habitat in Am. merid.

*Perplexum Embothrum*

grandiflorum Embothryum

Habitat in Peru herb. Aug.

Rami Veretos, crassitie penne Cygnei, fulvi, pallide minuti punctati. Solea petiolata, sparsa, bi-f. Unipollisaria, oblonga, mucronata, integerrima, cornuta, venosa, utrinque glabra, supra nitida, basi acuto, subter pallidiora. Radix terminalis, spithameus. Pedunculi semi-pollisarii, frequentes spinis. Parolle bipollisares. Encrustans bipollisani, cornutis, loris, glabri, medio crassitie fere pollitis, utrinque angustata, rostrum versus, pollisare.

*husfum Embotryum*

Habitat herb la Marthi 5

Rami husfo- Vomentosi. Solia petiolata, cordata - oblonga, obtusipima, conica ex torso sum remote denticulata, venosa, glauca et ultra. Sordidus oblongus  
glaucans, glaber

umbellatum Embotthym

Habitat he. b. musci

Rami teretes, glabri - Solia petiolata, alterna, lanceolata, obtusa, basi acuta,  
integerrima, glabra, avena, nervia - Pedunculi axillares, superne, foliis  
longioribus. Pedicelli 5-6. virginiæ greculæ.

*genanthem Embotinum*

Habitat - sub la Rev. le Paix

Rami teretis vellosa. Folia simplicia unguiculata, sparsa, oblonga, mucronata, rigidula, supra glabra, subvenosa, niti dupla, oculo ornata; cuncta subtus vellosa, connexantia, integerrima. Flores in umbella terminali, plures. Pedunculi ferruginei. Flores ex his albo hispiti. Cappula virga semi-pollucans, pubescens. Stylus sub hispitus.

herbae cum. Embothryonum.

Habitat. Herb. la Rev. le Paup.

Caulis herbaceus, erectus, teres, glaber, uti sola planta, simplex. Folio petiolato alterna rigida, bipinnata: pinnae lanceolatae, subfidae vel tridentatae, dicot. venae, venosa, supera nitida, pungenter. Racemus terminalis composta.  
Padunculi angulati, erecti, stricti. Bractea lanceolata, lineares; capitulo  
pollicaris.

*Lceanifolium Embothryum*

Habitat herb. Gus.

Rami trigonii, striati, superne duthomii, vallis ad propria nifestentibus. Folia septia,  
sope geminata vel terna, quo a Hillaria, sed quipollucaria, lceanis lanceolata, an  
gusta, glabra, arena, subulis subfencio, intermixta vallis nifestentibus; mucro  
nata. Pedunculae laterales breves: pedicelli incani, approximati, per un  
guem ulares, subracemosi

geanthum Lembotrys

Habitat herbar. Aug. t

Rami venae, villosi. Dolia frequentia angustulata, subpetiolata, acuta, mū  
crone vermiformata, supra nitida, subter villosa, canescens. Umbella Vermi  
nalis, sessilis, multiflora. Pedunculi ferrugineo-tomentosi. Flores semipolli  
cares, cinerei.
