

Hydrophyllum

1. maritima #

Crucifera caulibus tergis prostratis ramis: rami alterni D. A. 4. u. /

manitima Hydrophylax Lin. Suppl. p. 126 & S.V. p. 160

Habitat in arena volatili ad littora maris prope Gudastrum &

# Superne herba  
Eius  
Caulis ~~repens~~ <sup>basi lignosus ramosus</sup> foliiformis longis, carnosissimis  
articulatus glaber vaginatus, vaginis stipulaceis obtusi-  
membranaceis tubulosis persistentibus; longissimas. Folia oppo-  
sita, oblonga basi in petiolum attenuata, glabra, integerrima  
carnosa, mucronata, nitida ~~et serrata~~ <sup>margine serrata</sup> callis minimis albi-  
cantibus pellucidis. Petioli breves membranacei, marginati  
caulem <sup>non</sup> vaginantes, qui post caput foliorum vaginam caulem  
permanentes <sup>gemini binati</sup> constituunt. Flores axillares subsessiles, plerum-  
que ~~binati~~ <sup>gemini binati</sup>, non oppositi, exiti. Corolla pallide rosea

latifolia. <sup>inermis</sup> Elaeagnus foliis ovato oblongis, pedunculis floribus axillaribus aggregatis  
pedunculis flore brevioribus

Rami cortice fusco premolles perspicue alii minus argentei  
squamis ferrugineis ~~si se variat~~ foliis latioribus et angustioribus ellipticis  
tricus
