Habitat in Carolina

non vid.

Cyathiferus Launus foliis lanceolato-ellipticis supra nitidis, floribus panicula ramis
dichotomis, calycibus persistentibus cyathiformibus lobatis.

Habitat in Montserrat in Pyren.

Rami glabri, cortice fusco, apice cinerei.

Folia petiolata, albina, 4 vel quinque pollicaria, attenuata vel acuminata,
basi subacuta, membranacea, glaberrima; venosa, supra nitida,
subtus pallidiora, costa, ubi ⁱⁿ venis majoribus perperca: junctura subtus in
costa leviter villosa.

Petioles unguiculares, triquetri, supra plani.

Panicula infra foliacea et ex axillis superioribus, erecto patente, foliis
brevior. Pedunculi partiales albini, breves: dichotomi plerumque, in
terdum triflori, fructiferi fusci. ~~floribus tomentoso lanuginoso~~ ^{in partibus, erecti}.

Calyces inani: fructiferi glabri crassi lobis, cyathiformes, diametro un-
guiculari, margine integerrimo.

1500. ~~no 205~~ Montserrat

an exactata Swartzii,

Bicolor Laurus foliis elliptico lanceolatis subtus glaucis purpureo fereantibus, paniculis
erectis fructibus oblongis, calycibus deciduis.

Habitat in Montserrat in Ryas?

Rami glabri, fusci, apice teniter canescentes, tuberculati & capsulis foliorum

Folia ad apicem ramorum, approximata, petiolata, quadripolliciana,
obtusiuscula, basi acuta, vix undulata, membranacea, glabra, nervosa,
obscure venosa, subtus glaucis-purpureo fereantibus, venis majoribus saepe.

Petiolum

Racemi laterales et axillares superioribus, foliis brevioribus, erecto-patentibus.

Longitudine foliorum, pedunculi partiales alterni, triflori vel
dichotomi: ramulis trifloris.

Calyx deciduus, glaber; laciniis obtusis.

Fructus pollicaris, glaber, oblongus.

(An Laurus indica her.?)

Coryifolia Laurus foliis lato lanceolatis sesquipedalibus glabris, racemis terminalibus
buis decompositis, calycibus persepentibus, fructibus oblongis.

Habitat in montserrat de Ryan.

Arbor. Rami teretes, glabri, cortice cinereo, infera crassitie pennis anfractis,
inferne cicatricati.

Folia in ramis florentibus versus apicem ramorum, ternato-verticillata
in fructiferis alterna, interdum opposita, distantia; omnia brevis
sime petiolata, sesquipedalia vel minora, elliptico-lanceolata
integerrima, inferne versus sensim angustata, basi plerumque
obtusissima, apice attenuato, acuto, membranacea, utrinque
glabra, supra laevia, glauco viridia, subavenia, secundum nervos
obscura lineata; subtus pallidiora viridi flavescens, venosa.

Racemi floriferi in apice ramorum subumbellati, decompositi
6-8 pollicares, pat diffusi. Pedunculi angulati: partem
basim sparsi filiformes; supremi simpliciores uti pedunculus
communis et pedicelli glaucescentes. Fructiferi axillares
vel laterales: pedicelli unguiculares versus calycem
sensim incrassati, pedunculo communi duplo crassiores.
Flores parvi, ordioii?

Calyx 6 fidus, canescens: fructiferus cyathiformis, magnitudine nuclei Coryli, in
regemini rugosi, validi.

Fructus oblongus, pollicaris, lavis, obtusis

elongata P. 17 caulis foliis ovato-lanceolatis, attenuatis membranaceis, ^{simplex} ~~ramiculis~~ ^{ramiculis} axillaribus; caly-

ribus persistentibus; 6fidis

Habitat in montserrat & Pyrenis, in G. polo St. Cruce & West

Rami vixites glabri, cortice fusco.

Folia petiolata, altera nuda, quinque pollicaria, extrorsum attenuata, ^{obtusius venata,} tuberculata, membranacea, nitida, subtus pallidiora, 3ripalinervis, nervis exstantibus alternis, superiora vix persistentia, utrinque gla-

Petiole

Pedunculi axillares, ramosi, perparvaspicantes, longitudine foliorum, parthalibus, alteris, distantibus, quadriferi inersati.

Calycis laciniis oblongis, ovatis, glabris, persistentibus.

Fructus oblongus

Leucoxylon laevis foliis oblongo-lanceolatis planis perennantibus, vixenni foliis
brevibus, calycibus unisulcatis verrucosis. Sw. prodr. pag. 65.

In Montserrat legit Dr. Ryan 5

Rami teretes, superne subangulati, cortice fusco cinerascente, sparse
punctati, glabri.

Folia petiolata, alterna, 4. 5. pollicaria, elliptica vel lanceolata-ellip-
tica, acumine brevi terminata, subcoriacea, glabra, obscure venosa,
supra nitidiuscula, subtus opaca.

Petioles

Paniculae, axillares, solitariae, folio breviores. Pedunculis parvis ac
ternis, distantibus, trifloris vel trifidis ramis trifloris. Flores glabri, pedi-
cellati.
