

Spergula

1. arvensis L. foliis verticillatis, floribus decandris
2. pentandra L. foliis verticillatis, floribus pentandris
3. nodosa L. foliis oppositis subulatis lobatis, caulibus simplicissimis
4. lanina L. foliis oppositis subulatis ciliatis fasciculatis
5. saginoides L.

Spergula Mollejo foliis linearibus ^{but} ^{verticillatis} subanis, pedunculis unifloris
Habitat ad St. Matham s. Rohr no 9

Caulis plures diffusus dichotomi teretes glabri spithamei. Folia
inferiora pro superiora sive, unguiculata glabra inaequalia
integerrima. Pedunculi capillares 3-4 uniflori longitudine
foliorum.

Filiiformis Spargula?

Habitat in monte video Commeff. herb. Kusp.

Rauli filiiformis, teret^{er}, glabris, dichotomi, palmari vel ^{nan}ultra. Folia semipollicari
glabra, acuta, angustissima, linearia. Flores in dichotomiis et apice. Pedunculi pluri
nes divisi, pariter uniflori. Folia membrana ovata connata. Calycis foliola lan
ceolata, margine membranacea. Semina absque membrana

1 arvensis. Spermula foliis verticillatis floribus decandris Lin. N. pag. 437.

Spermula Dod: pempt. 527.

Alpine Spermula dicta major Bauh. Pin. 251.

Habitat in Europa agris

Paulis ^{interdum in prope} struthamius, erectus, inferne glaber, superne ~~et~~ pubescens simplicis, latus
bracteis. ^{interdum in prope} folia ^{interdum in prope} teret filiformia, verticillata, pollicaria in ternodiis
breviora. Peduncululi ternales dichotomi pedicelli filiformes medio
bracteis binis minutis, fructiferi reflexi

~ pentandra *Spergula foliis verticillatis floribus pentandris* Lin. P. V. pag 437.

Habitat in Germania, Gallia, Anglia, Hispania &
a procedente via differt nisi numero staminum. Planta spontanea Digitalis
caulibus prostratis
alphe *Spergula* facie minima seminebus marginatis Tournef 4 v. h.

Habitat. O

Caules proceri teretes simpliciter sulcati, pollicares saepe conferti foliosi. Folia
approximata, subsessile, subulata, sessile ~~et~~ sive sive subulata termi-
nata, basi utraque membranacea, margine ciliata, ~~subulata~~ ~~subulata~~
caulicibus connata brevissima, latiuscula, canaliculata subulata.
Cilia glanduliferi ore lenti. Siliqua siliqua siliqua interdum in axillis
Pedunculis terminalibus plerumque, solitariis, uni flori, subsessile.
Siliqua calycina ovata subsessile. Petala calycis minora

3 *nodosa* *Spergula* foliis oppositis subulatis terribus, caulibus simplicissimis Lin. S. V. pag.
437. Fl. Dan. 96.

Alpina nodosa Germanica Bauh. Pin. 251.

Arenaria Bauh. h. 3. p. 723.

Alpina palustris ericifolia, polygonoides, articulis crebrioribus; flore albo, ruf.
Thell. Plukh. alm. 23. t. 7. fig. 4.

Polygonum, foliis gramineis, alatum Loef. Prof. 204. t. 64.

Habitat in Europae frigidioribus capis subhumidis &

Caulis plures digitales erecti, simplicissimi, glabri, uti tota planta. Folia
^{pubescentia} ~~fixata~~ internodiis duplo dimidio breviora, suprema minuta. Peduncululi
terminales 12. capillares breves. foliola calycina oblonga. Petala calycis
duplo majora
